REDUCE YOUR CARBON FOOTPRINT

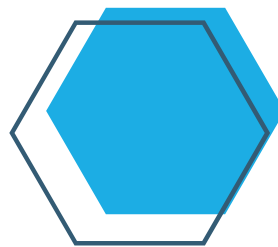

Understand your Carbon Footprint

The 'Carbon Footprint' of a business is the amount of greenhouse gases (GHG) in tonnes of CO₂e produced to directly and indirectly support business activities.

To accurately calculate the carbon footprint of a business, the energy usage, transport, waste and water consumption are all measured and collated before converting this data into tonnes CO₂e emissions, in line with the GHG reporting protocol.

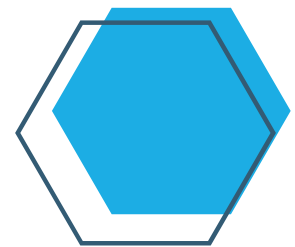

This can be a complex process and requires a good understanding of carbon management and data analysis.

Meet your ESOS and SECR Obligations

Our qualified and experienced energy specialists can guide your business through the obligations relevant to the size and scale of your business, carry out surveys and create SECR and ESOS reports on your behalf.

All of our carbon emission surveys are carried out and reported in ordinance with the requirements of the GHG Protocol, while Carbon Neutrality is reported in line with PAS 2060:2014 standards.

We can help your business achieve net zero

- ✓ Identify and understand the scope of your carbon footprint
- ✓ Collect and collate data in the correct format for calculating your carbon footprint
- ✓ Review, select and understand an appropriate methodology of carbon footprinting
- ✓ Identify and manage any business risks whilst maximising on cost saving and energy efficient opportunities
- ✓ Provide opportunities to offset what you cannot reduce any further by aiding global, and UK, sustainability projects.
