Carbon Verification

Supporting Emission Reduction Technologies

INDEPENDENT VERIFICATION

Technology Evaluation and Verification

Do you have a product or service with an inherent positive impact on GHG emissions, or that reduces on the emissions associated with current client processes ?

People find it easy to see the emissions savings associated with choosing renewable energy over fossil fuels, but often the big emissions savings are achieved by streamlining a service and removing the need for carbon intensive logistics and supply chain elements.

Quantifiable Results

We can provide a thorough carbon analysis of the full life-cycle of a product or service, calculated to PAS2050 standards.

This analysis can be benchmarked against industry norms, or against a comparative product or service, to give you quantifiable results on the amount of Carbon your customers and client base can save by selecting you.

Support your Green Credentials

- ✓ Our 3rd party verification will support and endorse your organisation's green credentials
- ✓ When you offset your carbon footprint you can benefit from marketing your organisation as Carbon net Zero.
- ✓ All of our carbon emission surveys are carried out and reported in ordinance with the requirements of the GHG Protocol, while Carbon Neutrality is reported in line with PAS 2060:2014 standards.
